**Saxe Blue K01**

**Graphite K03**

**Black K06**

**Chestnut K07**

**Burgundy K08**

**Old Gold K09**

**Moss Green K10**

**Navy K11**

TREVIRA CS is an inherently flame retardant fibre, chosen for use in Sico Europe stage curtains because of its many beneficial qualities. Conforms to BS 5867 Pt. 2 1908 (UK) Class B1 Din 4102 Pt. 1 (Germany) Classification M1 (France) and many other international flame retardancy standards.

The flame retardancy is inherent. It is achieved by modification to the fibre. It cannot be removed by wear, washing or ageing. Unlike treated textiles, the flame retardancy does not diminish. This rules out the need to replace curtains where the flame retardancy has been lost or is inadequate. TREVIRA CS fabrics are much stronger and longer lasting than comparable flame retardant treated fabrics which are weakened by the FR treatment. The high tear and burst strength associated with TREVIRA CS ensures long life.
