

SICO STARLIGHT DANCE FLOOR

Oak Parquet now available with brown or black moulding and gold or black trim!

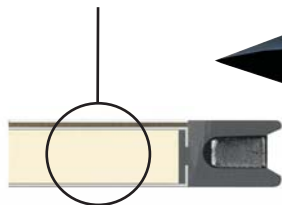

- SICO's STARLIGHT DANCE FLOOR is "the life of the party"-its versatility makes it appropriate for indoor and outdoor use.
- STARLIGHT panels are 4' x 4' (1219mm x 1219mm)—almost twice the area compared to 3' x 3' (914mm x 914mm) panels—but fewer pieces mean less storage space.
- Larger panels combined with the cam-lock means that setting up or taking down a dance floor can be done in almost half the time of smaller panels.
- STARLIGHT's **maintenance-free** surface is resistant to spilled drinks and food, and its unusually durable surface is easy to wipe clean and never needs refinishing.
- STARLIGHT is extremely resistant to high heel dents and scuffing.
- This revolutionary floor eliminates the warping, chipping and fading associated with many other dance floors.
- At only 3/4" (20mm) thick, STARLIGHT offers a lower profile for easier access.
- SICO's double "U" shaped caddy facilitates easy loading and unloading of panels, and our walk-in design allows storage of up to 24 panels plus all matching trim.
- Panels weigh 45 lbs. (20kg) and are shipped two per carton at 90 lbs. (40kg).
- The cam-lock reliable positive locking system is not dependent upon magnets or gravity to keep panels inter-locked, making set-up and take-down easy and convenient.

SICO cam-lock positive locking system

In the STARLIGHT, SICO has created a unique dance floor by combining a high-pressure laminate surface bonded with a structural foam core and steel skins.

STARLIGHT dance floors are designed for temporary outdoor use.
